Cloud-based RIS/PACS Primes Imaging Center for Success

Single-database system, single vendor is key to cost-efficiency.

Inglewood Imaging Center (IIC) is an independent diagnostic testing facility and one of the fastest growing businesses in Los Angeles County. CEO, Brad Schmidt, aligned his business strategy with INFINITT's cloud technology offering – an all-in-one RIS/PACS with processing and archiving done remotely, at INFINITT's secure data center. "INFINITT cloud solution addressed workflow, IT integration & support issues, and report & image distribution to referring physicians all in one package."

Bradley Schmidt, Founder and CEO, IIC

IIC wanted to go filmless and paperless, streamlining workflow to reduce report delivery times and improving access to images for referring physicians. IIC wanted one integrated solution that would reduce the number of vendors they had to work with and the number of systems they had to support, also minimizing interoperability issues and maintenance costs.

 IIC also wanted a pay-as-you-go financial model, where the cost of the service would always be in line with the revenue stream, and qualify as part of the operating budget.

SOLUTION

- IIC implemented INFINITT Smart-NET cloud solution, allowing them to run the RIS & PACS applications, to store images and reports at a secure data center, and to automate distribution of reports and images.
- The single-database RIS/PACS solution includes scheduling, reporting, speech recognition, document scanning, CD burning and 3D post-processing all on one platform.
- **INFINITT** *Smart*-**NET** allows IIC to view and store priors and studies brought to them on CD, and access images from the hospital system.

"INFINITT Smart-NET cloud-based RIS/PACS was a good choice for us; we've experienced 400% growth since we implemented it. I also like the solution's scalability: with continued growth, we have the option to convert to an on-site system without retraining, disruption in service or data migration issues.

Bradley Schmidt, CEO

RESULT

- The RIS/PACS helped IIC increase productivity; improve utilization of scanners, physical space and technologist time; and build loyalty with its referral base.
- The cloud-based system has solved security and other compliance issues, enabling staff to focus more on the quality of patient care.
- Pay-as-you-go financing has added a cash flow advantage, enabling IIC to invest capital dollars in equipment that generates revenues.
